Testing React Apps

Rafael Mariano (**Olinda**)

About me

Rafael Mariano

Tech Lead **Arquivei**

@toruticas

@toruticas

@rafael

Who am I?

- Everybody calls me Olinda
- Technical Leader of Frontend
- Janitorial manager of Brazil
- Terraplanist
- Aspiring historian

About me

Rafael Mariano

Tech Lead **Arquivei**

@toruticas

@toruticas

@rafael

Challenges

- Build a design system
- Grow a frontend team
- **Enhance more quality**
- Improve CI/CD
- Spread javascript universal,

  especially **NextJS**

“Revolucionar a utilização de documentos fiscais através de pessoas e tecnologia, transformando burocracia em oportunidade.”

Shallow

Real unit test (isolation, no children render)

Simple shallow

Calls:

- constructor
- render

Shallow + setProps

Calls:

- componentWillReceiveProps
- shouldComponentUpdate
- componentWillUpdate
- render

Shallow + unmount

Calls:

- componentWillUnmount

Mount

The only way to test componentDidMount and componentDidUpdate. Full rendering including child components. Requires a DOM (jsdom, domino). More constly in execution time. If react is included before JSDOM, it can require some tricks: require('fbjs/lib/ExecutionEnvironment').canUseDOM = true;

Simple mount

Calls:

- constructor
- render
- componentDidMount

Mount + setProps

Calls:

- componentWillReceiveProps
- shouldComponentUpdate
- componentWillUpdate
- render
- componentDidUpdate

Mount + unmount

Calls:

- componentWillUnmount

Render

only calls render but renders all children.
So my rule of thumbs is:

- Always begin with shallow
- If componentDidMount or componentDidUpdate should be tested, use mount
- If you want to test component lifecycle and children behavior, use mount
- If you want to test children rendering with less overhead than mount and you are not interested in lifecycle methods, use render

https://gist.github.com/fokusferit/e4558d384e4e9cab95d04e5f35d4f913

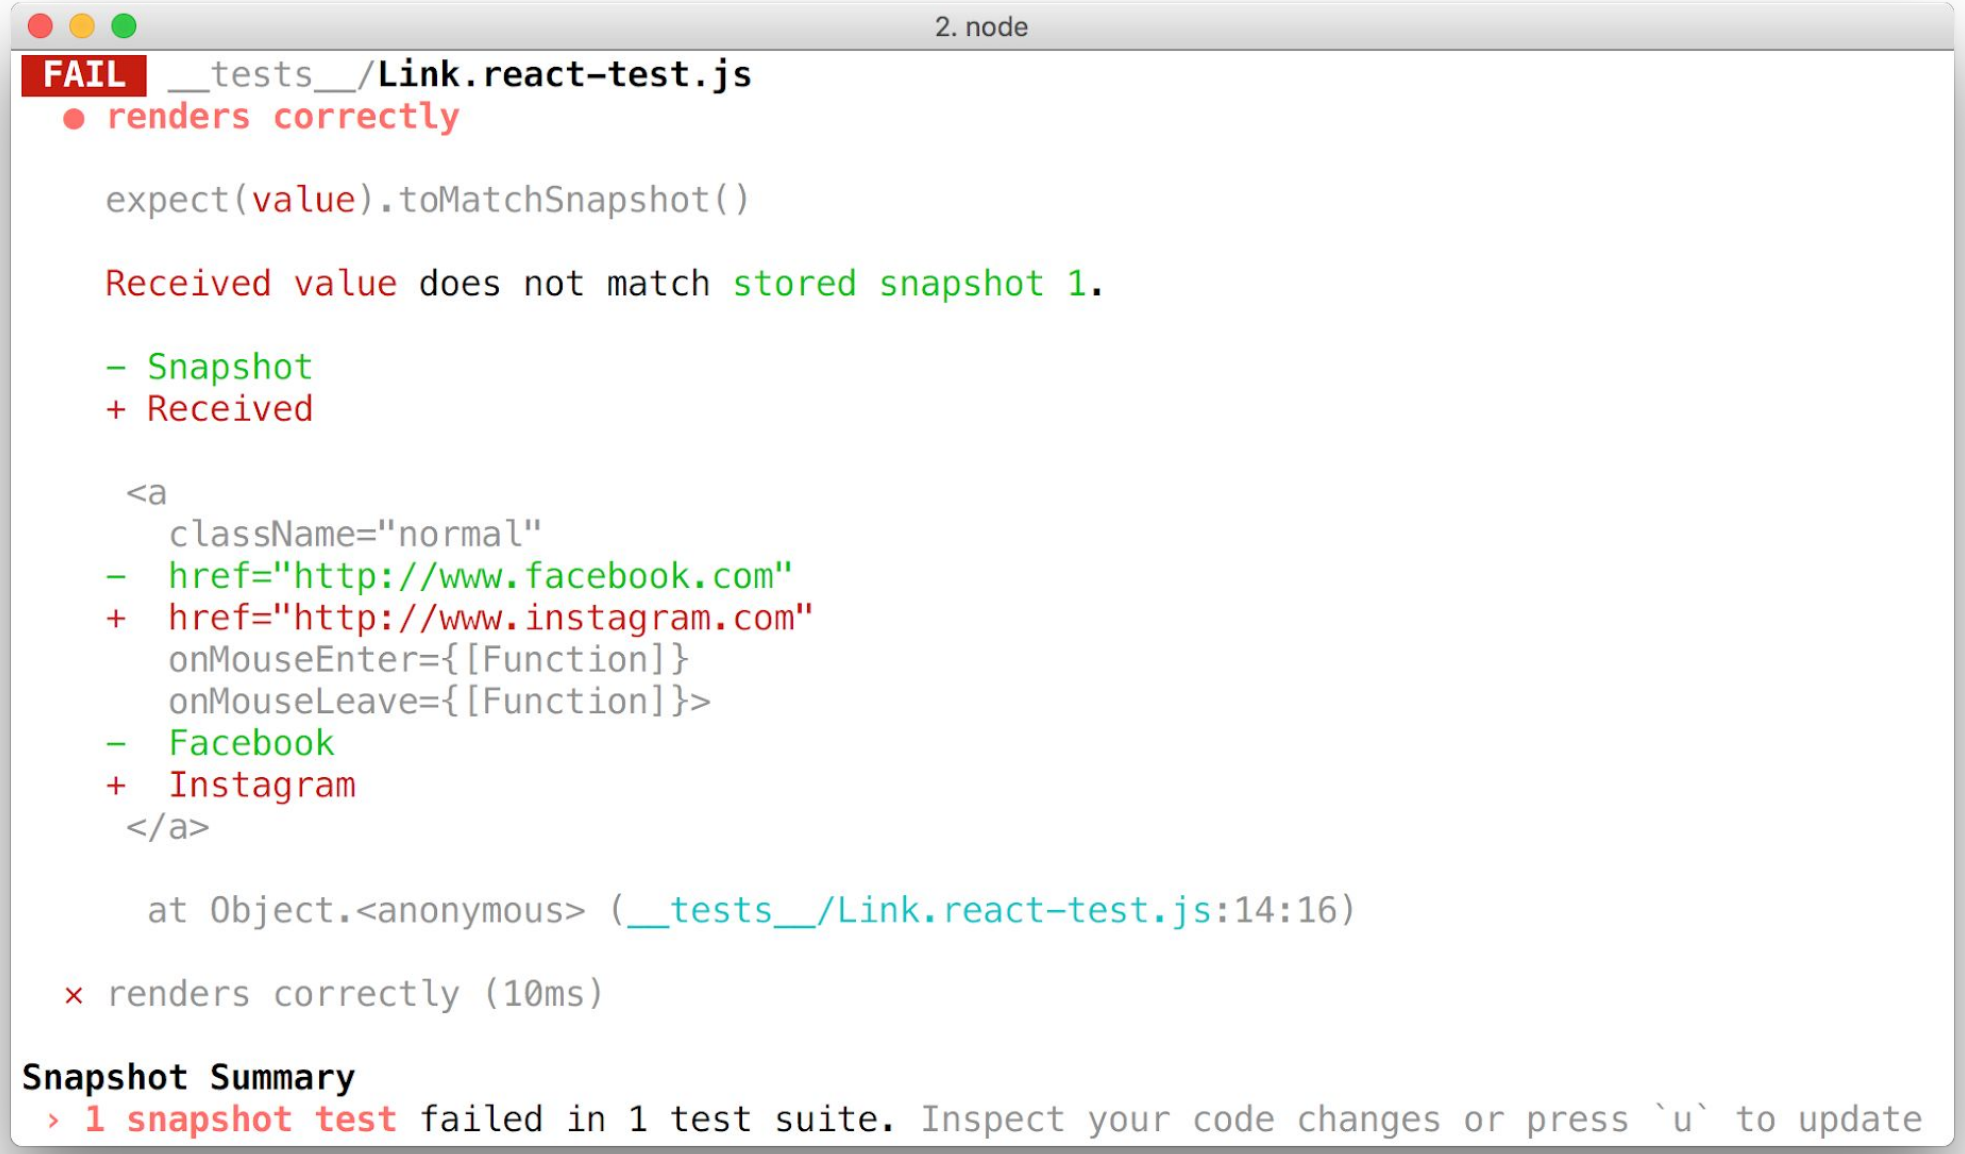
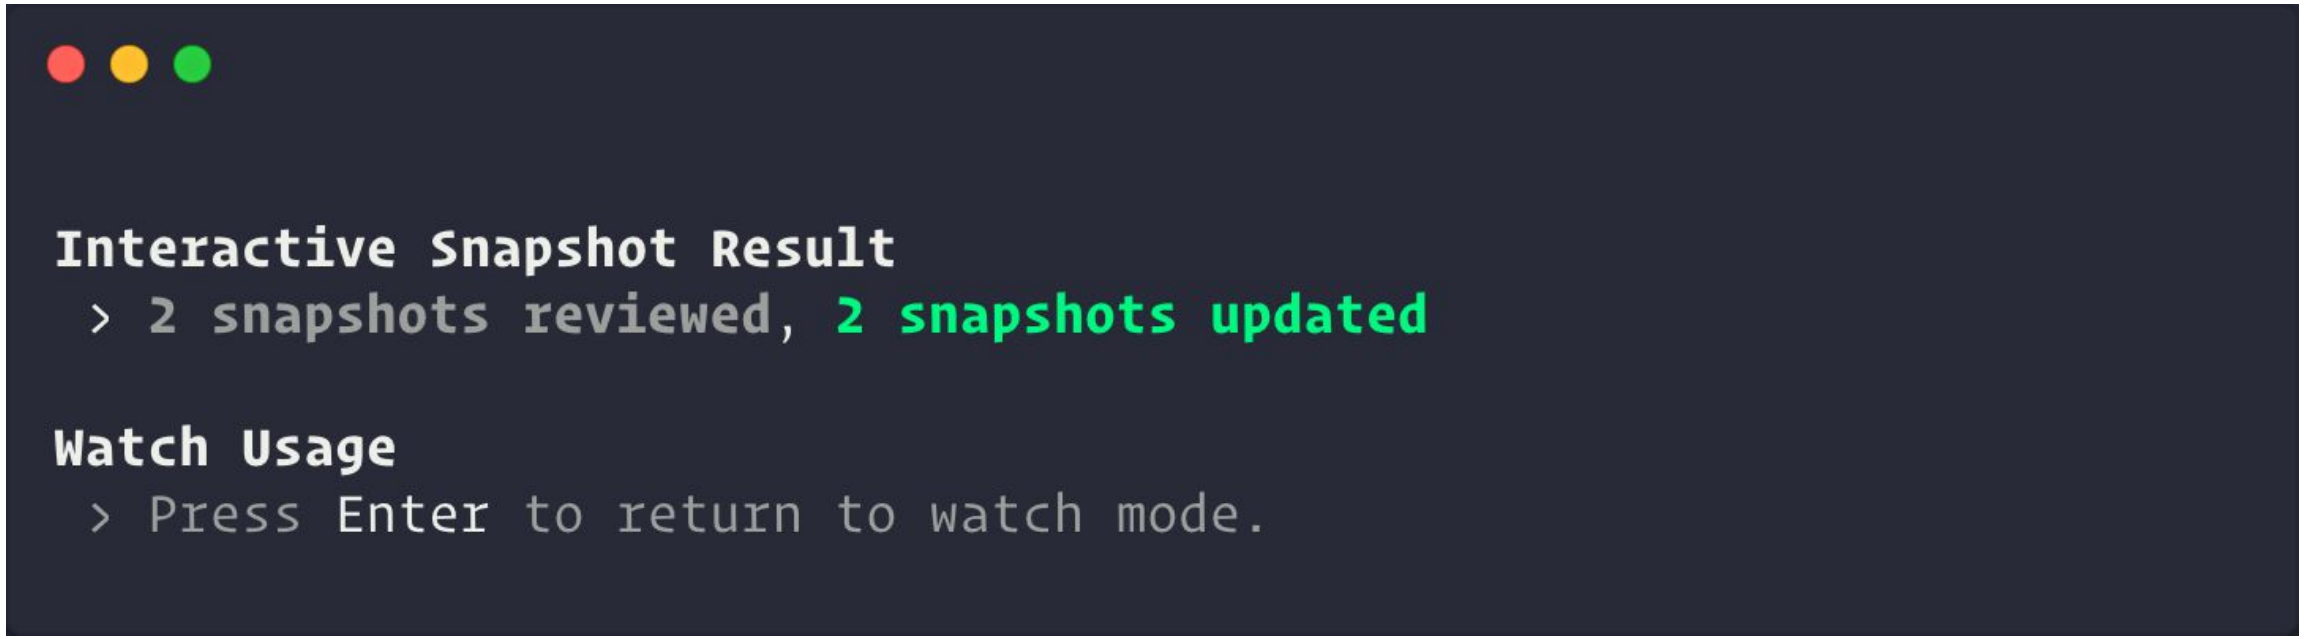
```
import React from 'react';
import Link from '../Link.react';
import renderer from 'react-test-renderer';

it('renders correctly', () => {
 const tree = renderer
   .create(<Link page="http://www.facebook.com">Facebook</Link>)
   .toJSON();
 expect(tree).toMatchSnapshot();
});
```

```
exports[`renders correctly 1`] = `
<a
 className="normal"
 href="http://www.facebook.com"
 onMouseEnter={[Function]}
 onMouseLeave={[Function]}
>
 Facebook
</a>
`;
```



2. node
FAIL __tests__/Link.react-test.js
● renders correctly
expect(value).toMatchSnapshot()
Received value does not match stored snapshot 1.
- Snapshot
+ Received
<a
className="normal"
- href="http://www.facebook.com"
+ href="http://www.instagram.com"
onMouseEnter={[Function]}
onMouseLeave={[Function]}>
- Facebook
+ Instagram
</a>
at Object.<anonymous> (__tests__/Link.react-test.js:14:16)
× renders correctly (10ms)
Snapshot Summary
› 1 snapshot test failed in 1 test suite. Inspect your code changes or press `u` to update



Interactive Snapshot Result
› 2 snapshots reviewed, 2 snapshots updated
Watch Usage
› Press Enter to return to watch mode.

Best practices

1. Treat snapshots as code
   commit them
   review then

Best practices

1. Treat snapshots as code
   commit them
   review then

2. Tests should be deterministic
   Date.now = jest.**fn**(() => 1482363367071);

Best practices

1. Treat snapshots as code
   commit them
   review then

2. Tests should be deterministic
   Date.now = jest.**fn**(() => 1482363367071);

3. Use descriptive snapshot names
   <UserName /> should handle some test case
